ANALYSIS

combomax *ULTRA*

THE NUMBERS SPEAK FOR THEMSELVES

The heating industry offers a wide range of systems and technologies, which can make meaningful comparisons tricky. To create a fair benchmark between the ComboMax ULTRA and a conventional setup pairing an electric boiler with a standard water heater, Thermo 2000 looked well beyond purchase price alone. The analysis factored in the **TRUE LONG-TERM INVESTMENT** by estimating the overall cost of ownership under realistic residential usage conditions.

A COMBINATION WITHOUT COMPROMISE

The ComboMax ULTRA is an electric boiler combined with an instantaneous water heater for residential applications. This 2-in-1 solution can easily heat large buildings of up to 4750 sq.ft. and provide domestic hot water in less than 7 seconds. Almost maintenance-free, it offers incredible energy efficiency! This unit requires less space, provides quality water, and has a long lifespan.

heating systems

THINK LONG TERM. SAVE EVEN MORE!

Planning to stay in your home for 10 years or longer? The ComboMax is the smart choice. While its purchase price is similar to that of a traditional setup with a separate boiler and water heater, it's built to last far longer. An investment that is intelligent and affordable. It is designed to stand the test of time.

COMBOMAX MORE HOT WATER. MORE SPACE. MORE PEACE OF MIND

- Unlike traditional water heaters, ComboMax delivers instantaneous domestic hot water. This ensures higher-quality potable water while preventing the growth of bacteria, such as Legionella.
- Over the span of one hour, ComboMax ULTRA produces 60% more hot water than a conventional water heater.
- Designed for tight spaces, it offers unmatched floor space savings compared to a two-unit system. A compact solution that fits seamlessly where every square foot matters.
